

Our clinic

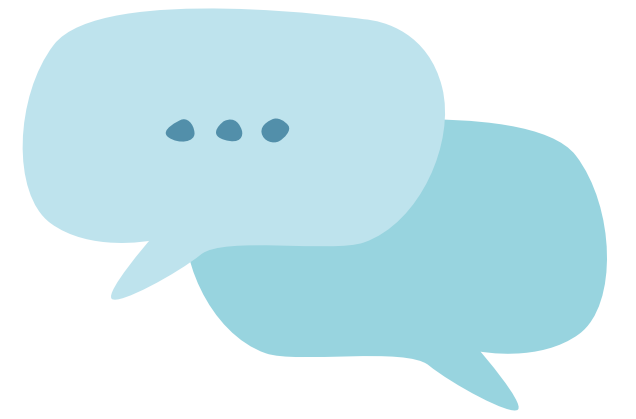

Now with i-scribe!

i-scribe

What is i-scribe?

i-scribe is an **Ai transcription service** that clinicians use during a consultation to help write their medical notes and letters.

Where's my data?

Your transcription data is stored on **Australian servers** for the short period of time nominated by your clinician, then deleted. Importantly, the data is processed in Australia, and is never sent overseas

Is it secure?

i-scribe has the same level of encryption as hospitals and other Electronic Medical Record Software that is used in this clinic.

Am I being recorded?

No. i-scribe **never records audio**. It listens and transcribes the conversation you have with your clinician, turning it into notes and letters. It's similar to having a human scribe taking notes, and follows the Australian Privacy Principles.

What are the benefits?

There are many! You can have **engaged conversations** with your clinician. They're not busy typing or jotting down notes. It also means letters can be sent to other clinicians by end of the day, **speeding up your care**.
